DIAGNOSIS AND CORRECTION OF METABOLIC DISORDERS IN CHILDREN (Future Health Programming) 14 days

The purpose of the program is to normalize the child's natural metabolism. The program provides a comprehensive analysis of the child's nutritional and social behavior, a thorough analysis of the peculiarities of his metabolism and energy balance based on the application of modern methods of biochemical and instrumental diagnostics. Personalized selection of the child's dietary menu, taking into account the results of the examination, correction of eating behavior and physical activity, lifestyle. Psychological motivation of the child to program the optimal parameters of his health. Application of modern fitness techniques.

GOALS of the program:

- Assessment of individual characteristics of health, nutrition, hereditary and metabolic risks.
- Assessment of the child's social and physical activity, behavioral reactions.
- Study and assessment of the characteristics of the child's metabolism.
- Identifying the main risk factors for a child's metabolic disorder and developing measures to correct them.
- Personalized recommendations for lifestyle changes, nutrition, and physical activity.
- Creating a programming model for future health and social development.
- Normalization of the main links of the child's metabolism, a gradual decrease in body weight, in the presence of excess body weight/obesity.

The program is intended for boys and girls from the age of 11 and their parents who want to be healthy, beautiful and successful.
