"METABOLIC BALANCE" PROGRAM *7 days*

Deep restoration of metabolic health and the body's energy.

Metabolic Balance — 7 days is a comprehensive medical recovery program designed to normalize metabolism, support weight loss, and establish long-term balance within the body.

Throughout the program, the team of doctors at Edem Clinic accompanies the guest at every stage — from advanced diagnostics to personalized solutions in nutrition, physical activity, and restorative procedures.

A systematic approach helps reduce metabolic stress, support the body's natural weight-regulation processes, and restore energy levels and vitality.

Metabolic Balance is not a short-term solution, but a thoughtful personalized path toward stable well-being and metabolic health.

During 7 days you will receive:

- A full range of examinations for safe and effective weight loss;
- Assessment of metabolic condition and potential risks;
- Individual recommendations from the preventive medicine team;
- Selection of the optimal pace of weight reduction specifically for you;
- A support therapy plan or a safe and well-structured completion of medication intake;
- A strategy to prevent weight regain.

Additionally, you will learn how to build healthy eating habits and reduce the risks of osteoporosis, muscle loss, and possible therapy-related complications.

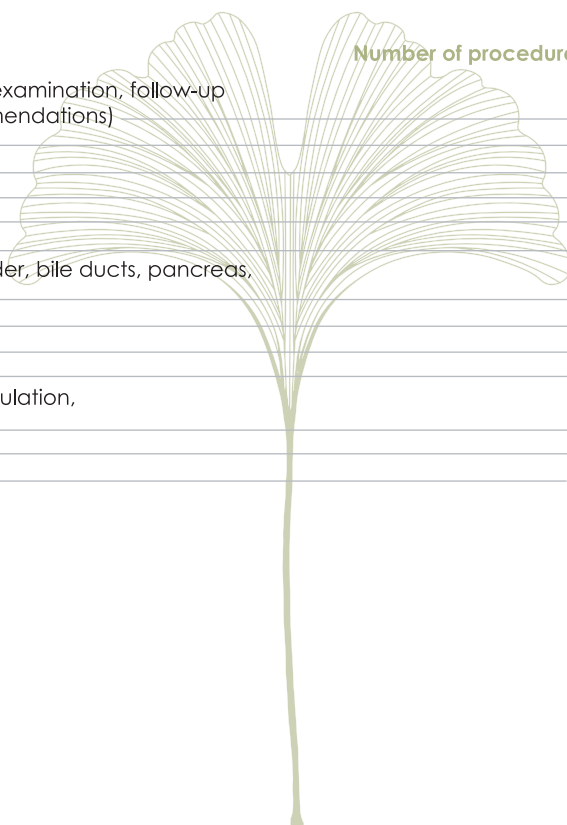

This format is designed for those who choose a conscious approach to weight loss — not a quick effect, but systematic work with metabolism and a stable long-term result.

At EDEM CLINIC, weight management is a thoughtful and personalized path to restoring and maintaining metabolic health
